PROFILE SUMMARY

I enjoy transforming business requirements into scalable technology solutions through software engineering, data analytics, and AI. Over the past 4+ years, I have built enterprise applications, automated business workflows, developed analytics platforms, and delivered AI-powered solutions using cloud, data engineering, and Generative AI technologies. Unique blend of software engineering experience and growing expertise in Data Science and Artificial Intelligence, enables me to build solutions that are both technically robust and business-focused.

SKILLS

AI & Data Science: Gen AI, LLMs (Azure OpenAI), RAG, Lang Chain, Vector Search (FAISS), Machine Learning, ETL Pipelines.
Programming and Cloud: Python, Java, SQL, Vue.js (Vue 2/3), HTML5, FastAPI, Identity Integration (PingOne,DaVinci) , AWS.
Tools: Power BI, Git, Jira, Azure Databricks.

EDUCATION

MSc Data Science and Artificial Intelligence Sep 2025 – Sep 2026

Middlesex University Dubai

Machine Learning, Artificial Intelligence, NLP, Cloud Computing, Data Visualization, and AI Ethics, with a focus on applying data-driven solutions to real-world business and technology challenges.

Bachelor of Engineering – Information Science and Engineering Aug 2017 – Aug 2021

SDM College of Engineering and Technology, Dharwad | CGPA: 8.6/10

Programming, database systems, computer networks, operating systems, software engineering, and data analytics, with hands-on experience designing and building software solutions.

WORK EXPERIENCE

Capgemini, Dubai Nov 2025 – May 2026

AI Engineering Intern

- Developed and tested AI powered applications using Azure OpenAI, LangChain, FAISS, and FastAPI for client-focused proof-of-concept projects.
- Implemented document ingestion, vector search, and retrieval workflows to enable natural language access to business knowledge and operational data.
- Collaborated with senior AI engineers on prompt engineering, solution evaluation, and feature development to improve response quality and user experience.

AI Projects at Capgemini

Internal Productivity Agent, Confidential Client

- Built a RAG-based AI assistant to help clients quickly access labor policies, regulations, SOPs, and historic case information through natural language queries.
- Developed document ingestion, semantic search, and response generation workflows using Azure OpenAI, LangChain, and FAISS to improve information retrieval and case resolution efficiency.
- Enabled features such as policy Q&A, case summarization, and complaint response drafting, reducing manual document search effort during pilot testing.

Sales & Operations Copilot, RAK Ceramics

- Developed an AI powered copilot to assist sales and product teams with product discovery, technical specification search, and quotation generation.
- Implemented semantic search and recommendation capabilities across product catalogs and technical documents using Azure OpenAI, LangChain, and FAISS.
- Automated product comparison and meeting-note summarization workflows, helping reduce manual effort and improve sales productivity during proof-of-concept evaluations.

Torry Harris Integration Solutions, India Jan 2025 – Sep 2025

Software Engineer

- Designed and delivered 15+ enterprise identity integration workflows using PingOne Identity and DaVinci, reducing workflow failures by 30% and improving overall system reliability.
- Performed root cause analysis and resolved 20+ critical production incidents, reducing issue recurrence by 40% while maintaining 99.9% platform availability.
- Designed and implemented an internal support analytics solution using Azure Databricks and Power BI, integrating Jira Service Desk ticket data across 10+ projects.
- Developed SQL based ETL pipelines following the Medallion Architecture (Bronze, Silver, Gold) to ingest and transform 5,000+ support tickets with daily refresh schedules.
- Built interactive Power BI dashboards tracking ticket volumes, resolution performance, and SLA compliance, reducing manual reporting effort by approximately 60%.

Cognizant Technology Solutions, India Sep 2021 – Sep 2024

Software Engineer

- Led end-to-end development and deployment of the ESO platform, enabling credential-free access and reducing login time by 60%.
- Optimized the ESO platform through backend tuning and UX enhancements, improving application response time by 80%.
- Migrated a largescale front-end application from Vue 2 to Vue 3 and upgraded backend services to Java 8, improving maintainability, performance, and scalability while reducing technical debt.
- Designed and developed an automated online workflow for processing major name change requests for U.S. customers, replacing a manual process with API-driven services and enabling SLA compliance within 10-15 business days.

CERTIFICATIONS

- Full Stack Engineering Certification, Cognizant
- Foundations of Project Management, Google
